MASSING AND ARTICULATION (Code Section – 70.20.10.3.)	Break for Long Facades Guideline: • Building facades longer than 200 feet facing the right of way, any internal drive or any internal accessway shall include massing breaks and/ or facade modulation to reduce the perceived length of building, reduce the bulk of the building, provide pedestrian interest, introduce architectural variety and include high quality materials. min Standard: All building facades longer than 200 feet facing the right of way, any internal drive or any internal accessway shall have at least one major break for every 200 feet in facade length. A major break shall be a vertical recess with a horizontal width of no less than fifteen feet and a footprint of 400 square feet. The recess shall extend from the roofline to grade or to an open space / landscaped area no greater than 5 feet above grade. If upper floors are set back a minimum of 6 feet from the primary facade plane, the major break does not have to extend through those upper floors. Major breaks shall not be within 20 feet of the horizontal facade edge.

Façade Modulation Guideline:

- Building facades that are taller than 30 feet, measured from grade plane to eave or top of parapet, whichever is higher, and longer than 100 feet facing the right of way, any internal drive or any internal accessway shall have facade modulations that create a distinct change in facade plane to create visual interest. Variation can be achieved through a combination of vertical shifts, horizontal shifts, upper-floor step backs, ground-floor step backs, angular shifts, exposed or emphasized structural elements, or other similar approach.

Standard:

For buildings taller than 30 feet, measured from grade plane to eave or top of parapet, whichever is higher, facades greater than 100 feet facing the right of way, any internal drive or any internal accessway shall be modulated to provide visual interest and break up facade planes by using at least one of the following facade modulation elements:

f. One or more vertical and/or horizontal recess(es) and/ or projection(s) with a minimum average depth of 12 inches that changes the primary plane of the facade for a minimum of 20 percent of the facade. Ground-floor and upper-floor step backs, as well as major breaks used to satisfy other Design Standards, may not be used to satisfy this requirement.
g. A step back of upper-floor facades with a minimum depth of 6 feet from the primary plane of the facade for a minimum of 70 percent of the facade length. Buildings providing an upper-floor step back to satisfy 70.20.10.3. Design Standards S3-S9 may not use upper floor step backs to satisfy 70.20.10.3.S2.
h. A step back of the ground-floor facade with a minimum depth of 2 feet from the primary plane of the facade for a minimum 70 percent of the length of the facade. Ground- floor step backs that exceed the maximum setback of the zone do not satisfy this standard.
i. Angular sloped or faceted surfaces that extends at least two-thirds of the height of the facade plane along a facade with a minimum average depth of 12 inches and a maximum 40 feet in length before a shift in the plane.

Building Height and Massing (RC-MU):

- In RC-MU, buildings greater than 55 feet in height shall reduce the overall scale and bulk of buildings and provide variety in building heights by reducing mass of upper floors.

Standard:

In RC-MU, buildings greater than 55 feet in height shall reduce the overall scale and bulk of buildings and provide variety in building heights by reducing mass of upper floors over certain heights by meeting the following standards:

a. All building floors entirely above 55 feet in height shall have a floor area less than 75 percent of the average floor area of the floors below 55 feet; and.

b. Street-facing facades of floors entirely above 55 feet that are within the maximum setback shall be a maximum of 66 percent of the average facade length of the floors below 55 feet; or

c. Floors entirely above 55 feet in height shall be stepped back by a minimum of 6 feet on the facade facing the primary frontage.

Building Height and Massing (RC-MU):

- In RC-MU, buildings may exceed the 75-foot height limit, up to 120 feet, by reducing the building mass of upper floors to minimize impacts on surrounding streets and buildings, and by providing at-grade pedestrian improvements. The building mass of upper floors shall be reduced by stepping back facades, shortening facade lengths, or other methods that reduces the massing compared to lower floors which results in:
  - a. Reduce the sense of enclosure for pedestrians along at least one street;
  - b. Increase access to light or sky views for people on abutting streets; and
  - c. Increase access to light for people inside current or future buildings across the street from the proposed development or, if the property abuts a creek, provide on-site creek access and enhancements that improve the pedestrian experience.

Standard:

In RC-MU, buildings exceeding the 75-foot height limit can only respond to the G8 Guideline. There is no Design Standard.

FACADE DESIGN

   i. Floor-to-floor height of the ground floor is a minimum of 3 feet taller than the average of the remainder of the floor-to-floor heights.
   ii. Ground-floor level is set back a minimum of 2 feet from the primary building facade for 70 percent of the street facing facade.
   iii. \All floors above the ground-floor level are set back a minimum of 2 feet from the ground floor level for 70 percent of the street facing facade.
   iv. A datum line that is provided between the ground floor and second floor. The datum line may project or be recessed. The datum line shall be a minimum of 4 inches in depth and height. The datum line shall be a minimum of 2 inches and depth and height if the predominant exterior building material, excluding windows, changes between the first and second floor.

b. A building will meet the requirement of a defined top by meeting one of the following strategies:

Standard:

All fenestration shall meet the following standards:

a. Windows shall be recessed a minimum of 2 inches. Facades or portions of facades utilizing a curtain wall are exempt from this standard.

b. Windows that are flat or "flush" with the facade are prohibited unless applied to a portion of a building that is part of a recessed facade modulation with a minimum 4 inches in depth. Facades or portions of facades utilizing curtain walls are exempt from this standard.

- Facades visible from a right of way, primary internal drive, or primary accessway shall provide adequate levels of clear glazing to ensure articulation on the facade, daylighting of interior spaces, and visibility into the street. Street-level glazing shall be inviting and enhance the pedestrian experience. Buildings abutting pedestrian walkways shall provide views of the walkway to promote pedestrian safety. Building facades built at shared property lines are exempt.

Standard:

Facades visible from a public street or primary internal drive shall meet the minimum glazing requirements below. Building facades built at shared property lines are exempt.

a. Non-residential uses:

GENERAL NOTES - WALLS

1. REFER TO SHEET A0.01 FOR 'PROJECT NOTES' APPLICABLE TO ALL PORTIONS OF THE WORK.
2. TESTING AGENCY DESIGNATIONS INDICATED IN THE WALL TYPE DESCRIPTION BOXES THAT INCLUDE **(G)** AT THE END ARE 'GENERIC' ; THE SYSTEM OR MATERIALS IN THE ASSEMBLY ARE NOT LIMITED TO SPECIFIC MANUFACTURERS.
3. TESTING AGENCY DESIGNATIONS INDICATED IN THE WALL TYPE DESCRIPTION BOXES THAT INCLUDE **(P)** AT THE END ARE 'PROPRIETARY' AND REQUIRE THE USE OF SYSTEMS OR MATERIALS BY SPECIFIC MANUFACTURERS. ALTERNATE TESTED PROPRIETARY ASSEMBLIES MAY BE DEEMED EQUIVALENT AND ACCEPTABLE, PROVIDED THAT THE OVERALL PARTITION WIDTH, SPAN CAPACITY, DEFLECTION CHARACTERISTICS, FIRE RATING AND ACOUSTICAL RATING ARE EQUAL TO OR BETTER THAN THOSE FOR THE ASSEMBLIES SPECIFIED.
4. DETAILED REQUIREMENTS LISTED WITHIN EACH ASSEMBLY DESCRIPTION BOXES REPRESENT THE MINIMUM NEEDED FOR CONFORMANCE WITH RATING AGENCY TESTS AND ARE PROVIDED FOR THE CONVENIENCE OF THE AHJ. THESE DESCRIPTIONS ALONE MAY NOT ESTABLISH ALL PROJECT REQUIREMENTS. CONFIRM TO ANY ADDITIONAL REQUIREMENTS SHOWN, DESCRIBED, OR OTHERWISE NOTED.
5. FIRE RATINGS INDICATED IN THE ASSEMBLY DESCRIPTION BOXES REPRESENT THE MAXIMUM FIRE RATING PROVIDE BY THE LISTED TESTED ASSEMBLY. THE HOURLY RATING SHOWN IN THE INDIVIDUAL WALL TAGS ARE EQUAL TO OR LESS THAN THIS MAXIMUM. THE RATING IN THE WALL TAGS REPRESENTS THE RATING REQUIRED TO MEET CODE.

GENERAL NOTES
HORIZONTAL ASSEMBLIES

1. REFER TO SHEET A0.01 FOR 'PROJECT NOTES' APPLICABLE TO ALL PORTIONS OF THE WORK.
2. DETAILED REQUIREMENTS LISTED WITHIN EACH ASSEMBLY DESCRIPTION BOXES REPRESENT THE MINIMUM NEEDED FOR CONFORMANCE WITH RATING AGENCY TESTS AND ARE PROVIDED FOR THE CONVENIENCE OF THE AHJ. THESE DESCRIPTIONS ALONE MAY NOT ESTABLISH ALL PROJECT REQUIREMENTS. CONFIRM TO ANY ADDITIONAL REQUIREMENTS SHOWN, DESCRIBED, OR OTHERWISE NOTED.
3. FIRE RATINGS INDICATED IN THE ASSEMBLY DESCRIPTION BOXES REPRESENT THE MAXIMUM FIRE RATING PROVIDE BY THE LISTED TESTED ASSEMBLY. THE HOURLY RATING SHOWN IN THE INDIVIDUAL WALL TAGS ARE EQUAL TO OR LESS THAN THIS MAXIMUM. THE RATING IN THE WALL TAGS REPRESENTS THE RATING REQUIRED TO MEET CODE.
4. IN ACCORDANCE WITH GYPSUM ASSOCIATION MANUAL GA-600 EXPLANATORY NOTES: UNLESS SPECIFICALLY NOTED AS PART OF A FIRE RATED HORIZONTAL ASSEMBLY TEST, UP TO 16-3/4" OF 0.5 PCF FIBERGLASS OR LOOSE FILL INSULATION MAY BE ADDED TO ANY 1- OR 2-HOUR ASSEMBLY PROVIDED THAT AN ADDITIONAL LAYER OF GWB OF THE SAME TYPE AND THICKNESS AS THE FACE LAYER OF THE TESTED ASSEMBLY IS ADDED AND FASTENED AS REQUIRED FOR THE FACE LAYER WITH FASTENER LENGTH INCREASED BY NOT LESS THAN THE THICKNESS OF THE ADDITIONAL LAYER.
5. GWB FOR WALLS IS 5/8" TYPE 'X' UNLESS NOTED OTHERWISE. GWB FOR CEILINGS AND SOFFITS IS 5/8" TYPE 'C' UNLESS NOTED OTHERWISE.
